Locations: Eastern, Southern, Northern, Central USA

Timing: Immediate

Pay Rate: \$60-\$100 / Hour, Subcontractors (1099) options also available

Other compensation: Overtime, Per Diem, and Sales Incentives also available

Company Info:

Independent Turbine Consulting is an independent provider of turbine-knowledgeable personnel, dedicated to providing high-experienced personnel at reasonable and sustainable rates. We primarily supply personnel to OEM and Utility clients to support outages or supplement their in-house workforce during turbine outage planning and execution.

We provide our employees with generous compensation options, based on experience level, positive references, professional network strength, and proven value to clients. We also reward employees for identifying and helping bring in new projects. Our work is typically at power plants in the Southern, Eastern, and Central USA.

Key responsibilities of the role include:

- Technical direction and management support of gas turbine maintenance outages (CI, HGP, Major, Hot section, etc)
- Outage planning, parts identification, scope development, schedule input
- Documentation of outage findings, with prompt and professional reports
- Provide Repair/Replace recommendations
- Technical Support and Consultation
- Troubleshooting of Turbine and Auxiliary systems
- Outage Client Representation and vendor oversight

Required experience and attributes:

- 5+ years experience as Turbine Field Engineer / TFA (Technical Field Advisor) / TD (Technical Director) / Utility Turbine Maintenance Engineer
- Experience with GE, Siemens, and other OEM turbines and generators
- Reliable
- High Energy self-starter
- Committed to safety and quality

Desired Additional skills:

- Scheduling
- Cost tracking
- Good professional network (both technical, and clients)
- Other specialty skills – Vibration, Controls, Generator, excitation, etc

Retirees and part-time workers are welcome. Apply today!
